HgCapital Trust plc: £250m NAV facility against 12 Hg fund interests

As of 11 November 2026 · Borrowing base: NAV at 30 September 2026 (Q3 report, published 5 November 2026) · Manager: Hg · SONIA 3.98%

APPROVABLE

£250m five-year senior secured term loan at SONIA + 6.25% and a 1.5% fee, an all-in yield of 10.5%, pari passu with HgT's £450m bank RCF and conditional on Hg's consent, as general partner, to the security and to a sale on enforcement. Day-one LTV is 16.4% once drawn, against a 30% covenant: fund NAV can fall 45% before it trips and 81% before a forced sale fails to repay the loan. The binding risk is HgT's £1.8bn of expected capital calls against £286m of liquidity, not the collateral. HgT has not sought it and probably would not take it today; this is how a lender would size and price it if asked.

BORROWING BASE, 30 SEPTEMBER 2026 (£M)

Portfolio valuation, HgT's look-through share	3,247.1
Fund NAV facilities and subscription lines (30 June)	(522.0)
Performance-fee provision less other fund assets (derived)	(118.6)
HgT's fund interests: the collateral	**2,606.5**
Value above a 10% single-name cap (Visma, 12.9%)	(76.0)
Eligible NAV	**2,530.4**
Memo: HgT net assets (539.1p a share)	2,442.1
Memo: trust net debt (£450m RCF less £286m liquidity)	164.0

Collateral = net assets + trust net debt (derived). Fund-level debt and residual cost are at 30 June, one quarter older than the NAV. Top 10 holdings are 55.8% of value and the top 20 75.1%, the equivalent of 21 equal holdings.

PROPOSED TERMS

Facility	£250m senior secured term loan, five years; pari passu with the RCF under an intercreditor
Security	The 12 LP interests (or a holding SPV's shares), shared with the RCF, and the distribution account
Consent (CP)	Hg, as GP, to the security and to a sale on enforcement
Covenant	LTV at most 30% of eligible NAV, tested quarterly
Cash sweep	10% of distributions up to 15% LTV; 25% to 20%; 50% to 25%; 100% above
Incurrence	No debt-funded calls or buybacks above 20% LTV; dividends stop above 25%
PIK toggle	Up to 50% of interest in years 1–2, at +0.50%
Pricing	SONIA + 6.25% (5.75–6.75%), 1.5% OID; non-call one year, then 2% and 1%

Markers: NAV margins averaged 435bp at banks and 794bp at non-bank lenders in August 2026 (Corpay); HgT's RCF is at SONIA + 3.00%. 36% of 2025 primary NAV facilities closed at 10–25% LTV (Proskauer).

SIZING GRID, FACILITY FULLY DRAWN

Day-one LTV	10.0%	12.5%	15.0%	16.4%	20.0%	25.0%
Facility (£m)	89	152	216	250	342	469
Severe case, day-one LTV	21.6%	27.0%	32.4%	35.3%	43.2%	54.0%

The severe case stays inside the 30% covenant up to a £188m facility (13.9% LTV), the size I would cut to if diligence disappoints.

WHAT RANKS AHEAD OF THE LOAN (LOOK-THROUGH, £M)

Layer	£m	Cumulative % of EV
Portfolio-company net debt (band estimate)	1,509	31.7%
Fund NAV facilities and subscription lines	522	42.7%
HgT RCF (net) and this facility, pari passu	414	51.4%
Carry provision and HgT equity	2,311	100.0%
Look-through EV, at 22.6x LTM EBITDA	**4,756**	

Two bases: HgT reports 6.7x debt to EBITDA, value-weighted (debt about 30% of EV); aggregated by leverage band it is 7.2x. The covenant trips at 16.3x EBITDA (EV −28%); a forced sale at a 15% discount first fails to repay the loan at 11.9x (EV −48%). Only 4% of value is marked below 15x.

STRESS AT CLOSE: VALUE, LTV AND THE FIVE-YEAR PATH

Shock	EV	Equity	NAV/share	LTV drawn	Peak LTV	Opt-outs
Base	–	–	–	16.4%	18.2%	24%
EBITDA −20%	−20.0%	−29.3%	−33.6%	23.9%	20.0%	50%
Multiple −2x	−8.8%	−13.0%	−14.8%	19.0%	20.0%	36%
Multiple −3x	−13.3%	−19.4%	−22.3%	20.7%	20.0%	41%
Exits +2 years	–	–	–	16.4%	20.0%	46%
Visma −50%	–	−6.5%	−7.4%	17.1%	18.0%	30%
Severe (all four)	−30.6%	−48.4%	−58.6%	35.3%	23.2%	93%

LTV drawn = shock after the facility is spent; peak LTV = five-year path with proceeds as pledged cash; opt-outs = share of expected calls HgT skips under the 20% cap. Severe = EBITDA −20%, −3x, Visma −50% and exits +2 years. Lender IRR is 10.8–10.9% in every row, with no loss. Weakest-year interest cover: 7.2x base, 2.5x severe (1.2x without PIK). Sale discounts (15%; 30% in stress) are my assumptions: no named stress loses unless a sale clears more than 80% below NAV.

LOAN VERSUS PREFERRED EQUITY ON THE SAME PORTFOLIO

	Loan £250m	Preferred £652m
Claim as % of fund NAV at close	16.4%	25.0%
Base IRR / MOIC	10.8% / 1.39x	14.1% / 1.33x
Severe case IRR	10.8%	12.0%
Loss if fund NAV falls 50% / 70% / 80%	none / none / £29m	£37m / £481m / £704m

Preferred terms are assumptions: 12% compounding, 100% of distributions until repaid, then 10% to year 5; no covenant. Tails delay exits two years and assume no growth and a 30% sale discount.

KEY JUDGEMENTS

- **Equity falls faster than EV.** With debt at 32% of EV, a 20% EBITDA fall cuts portfolio equity by 29% and NAV per share by 34%; equity in the over-10x band (14% of value) falls 40%.
- **Cash is the constraint.** Fund facilities took 14% of 2025's £215m of gross realisations. HgT received £195m and paid £220m of calls in 2025, then £34m against £114m in H1 2026.
- **Would HgT borrow? Probably not today.** Over five years £250m costs it £67m of NAV at its 6.7% five-year return and adds £93m at its 15.1% ten-year return; its 7.0% RCF is cheaper.
- **Enforcement runs through Hg** as GP: an LP may assign only with GP consent (Limited Partnerships Act 1907). Sale discounts are calibrated to buyout LP pricing of 91% of NAV in H1 2026.
